Project Description

Description Frase (max. 500 characters):

Augmented reality as learning environment - interactive collaborative elearning with "alive" learning materials.

Project Summary (max. 2000 characters):

With using augmented reality apps, there are no borders for learning contexts or environment. Augmented reality allows to combine and connect real-life scenarios and objects with digital environment perceptions.

Our project starts in autumn 2014, when project group students started to learn augmented reality apps - Aurasma and Collaraps. Then project-group students organized and aura-exhibition-workshop for younger school-mates (<https://www.youtube.com/watch?v=jQ6ql2kRX2Y> [1]) about using mobile apps and making auras. In this way older students are working as mentors for younger. The next step was organizing an exhibition of augmented reality objects made by students from 1st to 3rd grade. Next step in our project was to change it into an international project and we started common project with school on Faroe Islands (Denmark). We are using online workshops and Skype conferences as working tools and we are planned also student exchanges. Students will give an opportunity to practice their skills in real-life situation and practice new pedagogical methods: project-based, problem-based, inquiry-based, game-based learning, flipped classroom etc. Older students can be in the role of mentors to teach younger for innovative ways of using digital media. After common learning students will organize activities (exhibitions, workshops, conferences) to other students to show what they have learned. All materials, made during project, will use educational cloud services to make materials visible.

How long has your project been running?

2014-10-30 23:00:00

Objectives and Innovative Aspects

Using augmented reality in learning helps develop equal opportunities in inclusive education and to promote creativity and innovation in education.

Teachers and students are working as partners, advanced students are involved as mentors, all participants have good opportunity to try new digital tools for learning and teaching and to practice new pedagogical methods: project-, inquiry-, problem-, game-based learning, flipped classroom, BYOD-lessons etc.

During projects only free apps are used (Aurasma, Collarapp etc), participants can use their own devices, but for workshops it is possible to use equipment at school. We will use Skype conferences for preparatory work, also social media for groupworks (Facebook groups, Edmodo), and different mobile apps (EdSelf etc), educational resource cloud services will be used.

Results

Describe the results achieved by your project How do you measure (parameters) these. (max. 2000 characters):

Participat
topics an
informal l
(voting) s
participar
cafe type
during pr
pedagogi
communi

How many users interact with your project monthly and what are the preferred forms of interaction? (max. 500 characters):

We have

schools 35 students) - and as students can be the project-managers also, maximum number of participants is not expired.

We will use Skype conferences for preparatory work, also social media for groupworks (Facebook groups, Edmodo), and different mobile apps (EdSelf etc), educational resource cloud services will be used.

Sustainability

What is the full duration of your project (from beginning to end)?: Less than 1 year

What is the approximate total budget for your project (in Euro)?: Less than 10.000 Euro

What is the source of funding for your project?: Grants

Is your project economically self sufficient now?: Yes

Since when?: 2015-06-29 22:00:00

Transferability

Has your project been replicated/adapted elsewhere?: No

What lessons can others learn from your project? (max. 1500 characters):

All participants have gone to practice new pedagogic classroom, BYOD-lessons

Are you available to help others to start or work on similar projects?: Yes

Background Information

Barriers and Solutions (max. 1000 characters): Project is based on practical using own digital devices if devices are different or using different software - it is good for instructional materials, video-tutorials etc. Of course there are differences, but it is also good change to learn more.

Future plans and wish list (max. 750 characters): Through similar projects it is possible for participants to have similar visions for future. Participants can compare their experiences with local communities and will try to find ways how can they use Augmented reality can be as sample platform for similar projects.
